ANNEXURE C – RISK FACTORS

An investment made through the PMS would involve a significant degree of risk and is suitable only for investors who fully understand and are capable of bearing the risks of such investments. The Client should carefully consider the investment objectives, investment approaches and the investment restrictions as described in this Agreement and Disclosure Document. Accordingly, the Client should carefully consider the following factors, among others, before making a decision to invest through the PMS.

Management and Operational Risk

Reliance on the Portfolio Manager

The success of the PMS will depend to a large extent upon the ability of the Portfolio Manager to source, select, complete and realize appropriate investments and also reviewing the appropriate investment proposals. The Portfolio Manager shall have considerable latitude in its choice of Portfolio Entities and the structuring of investments. Furthermore, the team members of the Portfolio Manager may change from time to time. The Portfolio Manager relies on one or more key personnel and any change/removal of such key personnel may have material adverse effect on the returns of the Client.

The investment decisions made by the Portfolio Manager may not always be profitable.

Investments made by the Portfolio Manager are subject to risks arising from the investment objectives, investment strategy and asset allocation.

Action taken by the Portfolio Manager may result in attendant risk for the client. An "attendant risk" is a technical term which means a known risk you face by taking some action.

Restriction on transfer: The Client may be restricted / prohibited from transferring any of the interests, rights or obligations with regard to the Portfolio except as may be provided in the Agreement and in the SEBI Regulations.

Non-diversification risks: This risk arises when the Portfolio is not sufficiently diversified by investing in a wide variety of instruments.

No Guarantee: Investments in Securities are subject to market risks and Portfolio Manager does not in any manner whatsoever assure or guarantee that the objectives will be achieved. Further, the value of the Portfolio may increase or decrease depending upon various market forces and factors affecting the capital markets such as de-listing of Securities, market closure, relatively small number of scrips accounting for large proportion of trading volume. Consequently, the Portfolio Manager provides no assurance of any guaranteed returns on the Portfolio.

India-related Risks

Political, economic and social risks: Political instability or changes in the government could adversely affect economic conditions in India generally and the Portfolio Manager's business in particular. The Portfolio Entity's business may be affected by interest rates, changes in government policy, taxation, social and civil unrest and other political, economic or other developments in or affecting India.

Since 1991, successive governments have pursued policies of economic liberalization and financial sector reforms. Nevertheless, the government has traditionally exercised and continues to exercise a significant influence over many aspects of the economy. Moreover, there can be no assurance that such policies will be continued and a change in the government's economic liberalization and deregulation policies in the future could affect business and economic conditions in India and could also adversely affect the Portfolio Manager's financial condition and operations. Future actions of the Indian central government or the respective Indian state governments could have a significant effect on the Indian economy, which could adversely affect private sector companies, market conditions, prices and yields of the Portfolio Entity/ies.

Inflation and rapid fluctuations in inflation rates have had, and may have, negative effects on the economies and securities markets of the Indian economy. International crude oil prices and interest rates will have an important influence on whether economic growth targets in India will be met. Any sharp increases in interest rates and commodity prices, such as crude oil prices, could reactivate inflationary pressures on the local economy and negatively affect the medium-term economic outlook of India.

Many countries have experienced outbreaks of infectious illnesses in recent decades, including severe acute respiratory syndrome and the COVID-19. The COVID-19 outbreak has resulted in numerous deaths and the imposition of both local and more widespread "work from home" and other quarantine measures, border closures and other travel restrictions, causing social unrest and commercial disruption on a global scale. The ongoing spread of the COVID-19 has, had, and will continue to have a material adverse impact on portfolio entities, local economies and also the global economy, as cross border commercial activity and market sentiment are increasingly impacted by the outbreak and government and other measures seeking to contain its spread. Additionally, the Portfolio Manager's operations could be disrupted if any of its member or any of its key personnel contracts the COVID-19 and/or any other infectious disease. Any of the foregoing events could materially and adversely affect the Portfolio Manager's ability to source, manage and divest its investments and its ability to fulfil its investment objectives. Similar consequences may arise with respect to other comparable infectious diseases.

Indian economy and its capital market can be adversely affected by uncertain events such as extreme weather events such as flood, earthquake, etc; pandemics; natural disasters; act of terrorism; act of war; disruption in technology; travel restriction; or a combination of these or other risk factors.

Legal and Tax risks:

Tax risks: Changes in state and central taxes and other levies in India may have an adverse effect on the cost of operating activities of the Portfolio Entities. The government of India, state governments and other local authorities in India impose various taxes, duties and other levies that could affect the performance of the Portfolio Entities. An increase in these taxes, duties or levies, or the imposition of new taxes, duties or levies in the future may have a material adverse effect on the Client Portfolio's profitability. Furthermore, the tax laws in relation to the Client Portfolio are subject to change, and tax liabilities could be incurred by Client as a result of such changes. Under the provisions of Income-tax Act 1961, the arrangement under this Agreement can be construed as an 'Association of Persons' (AOP) in India and can be taxed according.

Bankruptcy of Portfolio Entity: Various laws enacted for the protection of creditors may operate to the detriment of the PMS if it is a creditor of a Portfolio Entity that experience financial difficulty. For example, if a Portfolio Entity becomes insolvent or files for bankruptcy protection, there is a risk that a court may subordinate the Portfolio Investment to other creditors. If the PMS/Client holds equity securities in any Portfolio Entity

that becomes insolvent or bankrupt, the risk of subordination of the PMS's/Client's claim increases.

Change in Regulation: Any change in the SEBI Regulation and/or other Applicable Laws or any new direction of SEBI may adversely impact the operation of the PMS.

Risks pertaining to Investments

Investment in Securities/Instruments

The Client Portfolio may comprise of investment in listed fixed income securities, listed debt securities/products and in case of such securities, the Portfolio Manager's ability to protect the investment or seek returns, liquidity may be limited.

In case of *in-specie* distribution of the Securities by the Portfolio Manager upon termination or liquidation of the Client Portfolio, the same could consist of such Securities for which there may not be a readily available public

market. Further, in such cases the Portfolio Manager may not be able to transfer any of the interests, rights or obligations with respect to such Securities except as may be specifically provided in the agreement with Portfolio Entities. If an *in-specie* distribution is received by the Client from the Portfolio Manager, the Client may have restrictions on disposal of assets so distributed and consequently may not be able to realize full value of these assets.

The Portfolio Manager will invest in securities listed on the stock exchange. In connection with such listing, the Portfolio Manager may be required to agree not to dispose of its Securities in the Portfolio Entity for such period as may be prescribed under the Applicable Law, or there may be certain investments made by the Portfolio Manager which are subject to a statutory period of non-disposal or there may not be enough market liquidity in the security to effect a sale and hence Portfolio Manager may not be able to dispose of such investments prior to completion of such prescribed regulatory tenures and hence may result in illiquidity.

The Client Portfolio may be invested in listed securities and as such may be subject to the market risk associated with the vagaries of the capital market.

The Portfolio Manager may also invest in Portfolio Entity/ies which are investment vehicles like mutual funds/trusts. Such investments may present greater opportunities for growth but also carry a greater risk than is usually associated with investments in listed securities or in the securities of established companies, which often have a historical record of performance.

Risks associated with investments in equity and equity linked securities

Equity and equity related securities by nature are volatile and prone to price fluctuations on a daily basis due to both macro and micro factors.

In domestic markets, there may be risks associated with trading volumes, settlement periods and transfer procedures that may restrict liquidity of investments in equity and equity related securities.

In the event of inordinately low volumes, there may be delays with respect to unwinding the Portfolio and transferring the redemption proceeds.

The value of the Client Portfolio, may be affected generally by factors affecting securities markets, such as price and volume volatility in the capital markets, interest rates, currency exchange rates, changes in policies of the government, taxation laws or policies of any appropriate authority and other political and economic developments and closure of stock exchanges which may have an adverse bearing on individual securities, a specific sector or all sectors including equity and debt markets. Consequently, the Portfolio valuation may fluctuate and can go up or down.

Client may note that Portfolio Manager's investment decisions may not always be profitable, as actual market movements may be at variance with anticipated trends.

Risks associated with investments in fixed income Securities/products

Some of the common risks associated with investments in fixed income and money market securities are mentioned below. These risks include but are not restricted to:

Interest Rate Risk: As with all debt securities, changes in interest rates affects the valuation of the portfolios, as the prices of securities generally increase as interest rates decline and generally decrease as interest rates rise. Prices of longer-term securities generally fluctuate more in response to interest rate changes than do shorter-term securities. Interest rate movements in the Indian debt markets can be volatile leading to the possibility of large price movements up or down in debt and money market securities and thereby to possibly large movements in the valuation of portfolios.

Liquidity or Marketability Risk: This refers to the ease at which a security can be sold at or near its true value. The primary measure of liquidity risk is the spread between the bid price and the offer price quoted by a dealer. Liquidity risk is characteristic of the Indian fixed income market.

Credit Risk: Credit risk or default risk refers to the risk which may arise due to default on the part of the issuer of the fixed income security (i.e. risk that the issuer will be unable to make timely principal and interest payments on the security). Due to this risk, debentures are sold at a yield spread above those offered on treasury securities, which are sovereign obligations and generally considered to be free of credit risk. Normally, the value of a fixed income security will fluctuate depending upon the actual changes in the perceived level of credit risk as well as the actual event of default.

Reinvestment Risk: Investments in fixed income securities may carry reinvestment risk as interest rates prevailing on the interest or maturity due dates may differ from the original coupon of the bond. Consequently, the proceeds may get invested at a lower rate.

Rating risks: Different types of debt securities in which the Client invests, may carry different level and types risk. Accordingly, the risk may increase or decrease depending upon its investment pattern, for instance corporate bonds carry a higher amount of risk than Government Securities. Further even among corporate bonds, which are AA rated, are comparatively more risky than bonds, which are AAA rated.

Price volatility risk: Debt securities may also be subject to price volatility due to factors such as changes in interest rates, general level of market liquidity and market perception of the creditworthiness of the issuer, among others (market risk). The market for these Securities may be less liquid than that for other higher rated or more widely followed Securities.

Investment and Liquidity Risks: Since the Portfolio may include a limited number of investments, poor performance by one or a few of the investments could severely adversely affect the total returns of the PMS.

Identification of Appropriate Investments: The success of the PMS as a whole depends on the identification and availability of suitable investment opportunities and terms. The availability and terms of investment opportunities will be subject to market conditions, prevailing regulatory conditions in India where the Portfolio Manager may invest, and other factors outside the control of the Portfolio Manager. Therefore, there can be no assurance that appropriate investments will be available to, or identified or selected by, the Portfolio Manager.

Ongoing risk profiling risk: The Client would be subject to ongoing risk profiling in accordance with the SEBI Regulation. If in case, it is found that the Client is not suitable for the investments in Securities in accordance with Applicable Laws, the Portfolio Manager may terminate this Agreement with the Client.

Regulatory Risks: The Portfolio Manager will operate as per the Applicable Laws, which provide for stringent investment conditions and compliances. If policy announcements or regulations are made subsequent to this offering, which require retrospective changes in the structure or operations of the Portfolio Manager, these may adversely impact on the Client Portfolio.

Risks associated with investments in derivatives

- Derivative products are leveraged instruments and can provide disproportionate gains as well as disproportionate losses to the investor. Execution of such strategies depends upon the ability of the Portfolio Manager to identify such opportunities. Identification and execution of such strategies to be persuaded by the Portfolio Manager involve uncertainty and decision of the Portfolio Manager may not always be profitable. No assurance can be given that the Portfolio Manager shall be able to identify or execute such strategies.
- The risks associated with the use of derivatives are different from or possibly greater than, the risk associated with investing directly in securities and other traditional investments.
- As and when the Portfolio Manager on behalf of Clients would trade in the derivatives market there are risk factors and issues concerning the use of derivatives that investors should understand. Derivative products are specialized instruments that require investment techniques and risk analysis different from those associated with stocks and bonds. The use of a derivative requires an understanding not only of the underlying instrument but also of the derivative itself. Derivatives require the maintenance of adequate controls to monitor the transactions entered into, the ability to assess the risk that a derivative adds to the Portfolio and the ability to forecast price or interest rate movements correctly. There is a possibility that loss may be sustained by the Portfolio as a result of the failure of another party (usually referred to as the "counter party") to comply with the terms of the derivatives contract. Other risks in using derivatives include the risk of mispricing or improper valuation of derivatives and the inability of derivatives to correlate perfectly with underlying assets, rates and indices. Thus, derivatives are highly leveraged instruments. Even a small price movement in the underlying security could have a large impact on their value.
- The options buyer's risk is limited to the premium paid, while the risk of an options writer is unlimited. However, the gains of an options writer are limited to the premiums earned.
- The writer of a put option bears the risk of loss if the value of the underlying asset declines below the exercise price. The writer of a call option bears a risk of loss if the value of the underlying asset increases above the exercise price.
- Investments in index futures face the same risk as the investments in a portfolio of shares representing an index. The extent of loss is the same as in the underlying stocks.

ANNEXURE D – DETAILS IN RELATION TO INVESTMENT IN DERIVATIVES

The Portfolio Manager might transact in derivatives in case it deems it necessary to protect the value of client's portfolios in periods of market instability. If the client does not want the Portfolio Manager to use derivatives at all in his/her portfolio, then, he/she can mention Derivatives as a negative security in the account opening form and the Portfolio Manager would be barred from using derivatives in the client's portfolio.

- a) **Quantum of Exposure in Derivatives:** up to 100% of the market value of the Portfolio, i.e. total exposure of the Portfolio Client in derivatives shall not exceed the Funds placed with the Portfolio Manager.
- b) **Manner & Purpose of using Derivative Products:** For Hedging, Portfolio rebalancing, yield enhancement or the purpose of taking such positions as may be permitted by the Regulations or any other Applicable Laws.
- c) **Type of Derivative instruments:** stock and index futures & options and such other products as may be permissible from time to time.
- d) **Terms of valuation Derivative products:** These products shall be valued at the Settlement / Closing value (as per accounting policy of the Portfolio Manager) price of the concerned Securities on the Bombay Stock Exchange and / or the National Stock Exchange (as the Portfolio Manager may choose).
- e) **Terms of Liquidation:** The Derivative instruments will be liquidated at the prevailing market prices or will be allowed to expire at the price specified by the exchange on the expiry date.

Strategy: Equity**1. Qode Growth Fund****(i) Investment objective:**

The investment objective of the Qode Growth Fund would be to generate alpha and risk adjusted returns for clients by following a Systematic Investing Approach, investing in a benchmark agnostic multicap portfolio with a mid and small cap bias towards companies which generally classify within the mid and small market capitalization space.

(ii) Description of types of securities:

Under this approach, the Portfolio would be primarily invested in listed equities and opportunistically also in money market instruments, units of mutual funds, ETFs or other permissible securities/products in accordance with the Applicable Laws.

The Portfolio Manager seeks to generate returns for the Client through price appreciation of the stocks held over a period of time. The approach aims to adopt a strategy of stringent stock selection process and a disciplined bottom-up investing approach on companies that have a potential to grow over medium to long-term horizon.

(iv) Allocation of portfolio across types of securities:

The Portfolio shall be focused through a collection of core holdings and shall seek diversification across various sectors of the equity markets. Securities shall be chosen amongst a wide spectrum of market capitalizations, from SME to large capitalization equities. However, from time to time on an opportunistically basis, may also choose to invest in money market instruments, units of mutual funds, ETFs or other permissible securities/ products in accordance with the Regulations. The Portfolio Manager may also, from time to time, engage in hedging strategies by investing in derivatives and permissible securities/instruments as per Applicable Laws.

(v) Appropriate benchmark to compare performance:

The Portfolio Manager endeavors to invest in a multicap portfolio including broader markets which are categorized as small and medium market capitalization companies. Effective April 1, 2023 SEBI has prescribed the Portfolio Managers to choose benchmarks from Nifty 50 TRI, S&P BSE 500 TRI and MSEI SX 40 TRI. Out of the options available under regulations, S&P BSE 500 TRI was considered to be most appropriate.

(vi) Indicative tenure or investment horizon:

Typically, investments with a medium to long term time horizon of 5-7 years.

(vii) Risks associated with the investment approach:

Below are select risks associated with the investment approach apart from those disclosed in the Portfolio Management Services Agreement. The risks may affect portfolio performance even though the Portfolio Manager may take measures to mitigate the same.

- a) **Company risk:** The performance of the investment approach will depend upon the business performance of the Portfolio Entity and its future prospects. Portfolio Manager's focus on studying the business and the sustainability with focus on studying the balance sheet will help the Portfolio Manager in mitigating these sector or company risks.
- b) **Valuation risk:** Portfolio Manager will assess the Portfolio Entities from varied valuation parameters in order to establish whether the valuations are reasonable while investing and reassess the same from time to time.
- c) **Market risk:** Portfolio Manager endeavors to invest in companies using bottom-up fundamental research rather than trying to time the markets. However, the Portfolio Manager will monitor the market and economic circumstances from time to time that may affect the performance of the Portfolio Entities.
- d) **Liquidity risk:** While investing in equities and Portfolio Entities, liquidity constraints are potential near-term risk

Qode

while investing and disinvesting the Portfolio Entities. The Portfolio Manager endeavors to mitigate the risks by investing with a medium to long term time horizon.

- e) **Concentration Risk:** Endeavor to have adequately diversified portfolio across sectors and stocks.

(viii) Redemption / Partial withdrawals:

Partial withdrawal shall be allowed only to such extent that portfolio value after recovery of fees, charges, and payment of withdrawal amount is not less than the minimum investment specified in the Minimum investment clause in this schedule.

(ix) Use of derivatives:

The Portfolio Manager might transact in derivatives in case it deems it necessary to protect the value of client's portfolios in periods of market instability.

- a) **Quantum of Exposure in Derivatives:** Up to 100% of the market value of the Portfolio, i.e. total exposure of the Portfolio Client in derivatives shall not exceed the Funds placed with the Portfolio Manager.
